

Active AI bias & drift detection — and the EU AI Act evidence to prove it.

Logging tools tell you what your model said. They can't tell you it started behaving **differently** today. Verispect actively probes your production LLM for bias and drift, scores it deterministically, and produces the audit-ready report enterprises and regulators demand — in one line of code, with **zero access to your data**.

THE PROBLEM	THE VERISPECT WAY
Providers silently update models. Fine-tunes degrade. A fair hiring or credit model quietly starts discriminating — and nothing in your code changed. Observability can't see it; inputs/outputs still look normal.	Calibrated synthetic probes + replays of your own traffic test behaviour continuously, catch change the moment it happens, and map findings article-by-article to the EU AI Act. We receive only hashes + vectors — never your content.

Why Verispect wins

Active, not passive	We test behaviour continuously — incl. silent provider model updates — instead of only logging it.
Audit-ready by default	Branded report mapped to EU AI Act Art. 9/10/13/14/72 + Annex III. The document your buyer asks for.
Privacy by architecture	Only SHA-256 hashes + embedding vectors leave your machine. We reduce your data-protection surface.
One line, zero latency	<code>wrap(OpenAI(...), verispect_key=...)</code> — your calls return immediately; all probe work is async.

How it works

1. Add one line to your OpenAI client. 2. Verispect probes a sample of live traffic and scores drift vs your baseline. 3. Download a continuously-updated, audit-ready compliance report.

Verispect vs. observability tools

	Helicone	LangSmith	Braintrust	Verispect
Logs traffic	Yes	Yes	Yes	Yes (hashes)
Active in-prod probing	—	—	—	Yes
Protected-characteristic bias probes	—	—	—	Yes (8)
EU AI Act report output	—	—	—	Yes
Never sees your raw data	—	—	—	Yes

Pricing

Free (10k calls/mo) · **Pro €99/mo** (most popular) · **Business €399/mo** · **Enterprise** (custom, white-label + SLA).
Start free, no card.

Run a free snapshot — see your model's drift in 5 minutes.
One line of code. We never see your data.
